

Image/Study Transfer and Collaboration Between Healthcare Facilities

Challenges:

- Sharing studies requires secure, difficult-to-manage VPN connections between facilities
- Current cloud-based solutions require separate “appliances” at the endpoints
- Facilities reluctant to allow external studies into their internal IT infrastructure
- Patient care compromised by lack of images/reports prior to patient’s transfer one site to another
- CD/DVD is not an effective collaboration tools

Solution: ASTRA by Candelis

Patient reports are securely and rapidly transferred from point A to B via ASTRA™.

- Drastically Improves clinical response time with potential life-saving benefits
- Data is always secure
 - Encrypted during transmission and at rest
 - VPN not required
 - Available as an “appliance-based” and “appliance-less” service
- Data exists consistently in native full-resolution format making rapid collaboration possible
- Eliminates the need for CD and DVD and faxing as medium for collaboration/ sharing
- Provides Thin (browser-based) Client support for access from mobile devices such as iPad, iPhone, Blackberry, and Android
